

Business Continuity Plan

Approved continuity summary for the fictional Kestrel Ridge Knowledge Workspace.

Document control	Value
Reference	KRS-BCP-2026-12
Owner	Site Reliability Engineering
Approved	July 15, 2026
Testing cadence	Annual exercise; quarterly control review

Recovery target: restore the Knowledge Workspace within an 8-hour RTO and 4-hour RPO, subject to the documented continuity process.

1. Recovery objectives

RTO	RPO	Plan owner
8 hours	4 hours	Site Reliability Engineering

2. Continuity process

The continuity plan defines incident command, customer communication, restoration priorities, and post-incident review. Material service disruptions are managed through the incident-response process and reviewed for corrective actions.

The plan is exercised annually. Recovery controls and contact paths are reviewed quarterly; findings are tracked through the technology risk-management process.

3. Scope limitation

Recovery objectives are targets, not a guarantee of uninterrupted service. Customer responsibilities include maintaining current identity-provider configuration, designated administrators, and export procedures appropriate to their own continuity requirements.
