

Data Handling & Retention Policy

Approved internal policy excerpt for customer-content lifecycle questions.

Document control	Value
Reference	KRS-DHP-2026-04
Owner	Privacy & Trust
Effective	August 1, 2026
Review cycle	Annual

Policy intent: define how customer content is handled, retained, and removed from active systems and routine backups.

1. Customer content

Customer content remains under the customer’s control. Kestrel Ridge processes customer content only to provide, secure, and support the contracted service.

Workspace administrators may delete content and manage member access through the administrative console, subject to their organization’s configured permissions.

2. Retention and deletion

Lifecycle event	Approved policy statement
Active workspace	Customer content is retained while the workspace remains active, subject to customer-directed deletion.
Deletion request	Deleted content is removed from active service systems and scheduled for removal from routine backups within 30 days.
Account closure	Following verified account closure, customer content is scheduled for deletion under the same backup-removal period unless a documented legal or security hold applies.
Support access	Support personnel access customer content only when necessary to resolve a support request and under role-based access controls.
