Owner	Solutions Engineering
Approved	August 1, 2026
Audience	Sales engineering and security review

Integration snapshot: standards-based enterprise sign-in, role mapping, a versioned REST API, and auditable administrator controls.

1. Supported integration model

Kestrel Ridge Knowledge Workspace supports standards-based enterprise sign-in using SAML 2.0 and OpenID Connect. Customer administrators configure identity-provider metadata, domain restrictions, and role mappings in the administrative console.

The product provides a versioned REST API for approved integrations. API credentials are issued per integration, scoped to configured permissions, and can be revoked by a customer administrator.

2. Operational controls

Cap ability	Approved statement	Evidence owner
Audi t trail	Administrative configuration changes and API credential events are recorded in the workspace audit trail.	Platform Operations
Mon itori ng	Service health and integration failures are monitored by the operations team and routed through the incident process.	Site Reliability
Rol e m appi ng	Identity-provider groups may be mapped to workspace roles; least-privilege assignment remains a customer administrative responsibility.	Solutions Engineering
